Test Plan

Description: You want to check the correct functioning of the Login.

Scope

The login to the web page https://www.saucedemo.com/ will be validated from Firefox browsers (117.0 g4-bit), in turn the following business rules.

- Upon successful login, the inventory.html page should be displayed.

Out of range

- Different functionalities when logging in

Strategy

The registration and login will be done through manual and automated tests starting on the main page which is 'https://www.saucedemo.com/', in case the user presses the login button without having the fields entered, it should display a message indicating that this field is required.

The fields are: Username and Password. After entering the data correctly, the inventory page with the available products should be displayed.

Suspension Criteria:

It will be done when:
- The system does not comply with the requirements established by PO, after implementing the suspension will have 20 working days.

Acceptance Criteria:

- Features must be deployed in the QA environment and have been tested.
- Critical defects found during testing have been resolved and closed.
- When the business validations are correct.

ONCEDEV

Return Criteria

- When the system has an error or failures with a percentage greater than 40%.
- The system does not meet the prerequisites for the registration of additional purchases.
